

Managed Security Services.

Sysnet Global Solutions offer a wide range of managed security services to help organisations of all types and sizes meet their information security management and compliance requirements. Our managed security services include SIM on-Demand, Log Monitoring, Network Intrusion Prevention and Detection Service, Firewall Management, Managed Vulnerability and Web Application Scanning as well as Log Retention.

Firewall Management

Today's organisations rely on highly available, secure computing environments to efficiently and safely conduct business. Firewalls are a key component of a secure network and must be managed properly to ensure they protect your critical information assets.

Service Benefits

- Satisfies log retention requirements for PCI, FFIEC, SOX and other regulations
- 24x7x365 proactive administration
- Ongoing maintenance of firewall devices

Security Monitoring

Security Monitoring is vital to an effective information security program which monitors the activity occurring across your security infrastructure and critical information assets.

This managed security service allows your organisation to choose the platforms where logs must be monitored (servers, security infrastructure, network components, etc.) and the service level you require (full management, monitoring or self-service). Reports are available through our portal for all platforms and service levels where you can use built-in workflow to capture signatures for audit purposes.

Service Benefits:

- 24x7x365 alert and log monitoring
- Advanced correlation
- Immediate incident response
- On-demand reporting

Log Retention

Log Retention, which is the aggregation and storing of network and application logs for archival purposes, is essential for many organisations for both security and compliance. Industry regulations such as PCI require organisations to monitor and archive logs. Log retention is also important for forensic investigation and network troubleshooting

Service Benefits

- Satisfies log retention requirements for PCI, FFIEC, SOX and other regulations
- Provides on-demand access to all log data
- Supports security and network troubleshooting

SIM (Security Information Management) on Demand

SIM on-Demand provides superior security and compliance for your organisation without the heavy lifting required to install and configure a SIM product or the added expense of hardware and staff to maintain/manage your solution. In fact, SIM on-Demand can be up and running, protecting your organisation, in just days.

Service Benefits:

- Identify and respond to threats faster
- Efficiently demonstrate compliance
- Prioritize and track issue resolution
- Make better-informed security decisions

Simple, Safe & Secure Solutions.

Network Intrusion Prevention and Detection Service

Our Managed Intrusion Prevention and Detection Service protects your critical information assets from existing and emerging threats. Our Intrusion Prevention and Detection System (IPS/IDS) experts will perform all management and maintenance of these devices.

Service Features:

- Signature tuning
- Signature updates
- Configuration changes
- Security event monitoring
- Performance and availability management
- Monitoring of firewall logs for security events in real-time

Managed Vulnerability and Web Application Scanning

Vulnerabilities appear every day in applications, websites as well as within devices and networks. Some vulnerabilities can be exploited and some cannot which gives an organisation the opportunity to prioritize which devices and/or applications need remediating first.

Service Benefits

- Structured approach to vulnerability management
- Can be run as an on-demand or as a scheduled service
- PCI approved vulnerability scanning software and testing methodology
- Improved IT asset and technology audits
- Easily integrated in the organisations ongoing Risk Management Programme

Reasons to choose Sysnet.

- Market leader in ISO 27001 & PCI DSS Services, vulnerability management and audit & assessment consulting.
- Over 20 years experience in multiple IT environments.
- Over 300 individual clients in 35 countries and over 50,000 merchants registered to our online PCI DSS Reporting Solution.
- Expert engineering & consulting teams that are certified to the highest recognised standards, CISSP, CISM AND CISA.
- Extensive range of Security Services such as Vulnerability Scanning, Penetration Testing, Payment Application Testing.
- Proprietary online Compliance Management Portal.
- PCI Security Payments Council – Qualified Security Assessors (QSA)
- PCI Security Payments Council – Approved Scanning Vendors (ASV)
- ISO 27001 Certified Information Consultants
- PFI certified by the PCI council
